

HTML Forms are used to collect information:

- A. "This Week's Planning" is a form. It collects information with the help of checkboxes. They can be ticked and unticked. Try, if you haven't already.
- B. Checkboxes have a value. When the checkbox gets ticked, its value gets collected. What is the value of these checkboxes? (Look in the html code)
- C. Checkboxes can also have a label. That's what people see. A label and a checkbox belong together, if the 'for' attribute of the label is the same as the 'id' attribute of the checkbox.
- D. "This Week's Planning" is not complete, we do more things than "Website, Python, Botting and Typing". Please add the other things to the form.
- E. Is there a better title for the form? Please change the legend, if you think there is.
- F. Choose a colour theme for this page ([Shades & Mix](#)) and set it for the body and menu backgrounds, as well as for the fieldset border and the text (in the html.css file).
- G. The list that appears when you tick the checkboxes is numbered. What would you need to change if you wanted it to be an "abc" list?
- H. Do you know what "default value" means? It is a value that is already set, in case you don't set one.
What is the default value for the volume (loudness, 1-10) of Loulou's voice ([see family page](#))? What about yours?
In css, what do you think is the default value for the colour of text? What for the background colour?

```
# html code for the planning form
<form name="planning">
  <fieldset>
    <legend>This Week's Planning</legend>
    <input type="checkbox" id="cb_website" value="website" />
    <label for="cb_website">Website</label><br />
    <input type="checkbox" id="cb_python" value="python" />
    <label for="cb_python">Python</label><br />
    <input type="checkbox" id="cb_botting" value="botting" />
    <label for="cb_botting">Botting</label><br />
    <input type="checkbox" id="cb_typing" value="typing" />
    <label for="cb_typing">Typing</label><br />
  </fieldset>
</form>
```
